

FACT SHEET

IP Office Messaging Applications

Options for Voicemail, E-mail and More

Overview

Messaging applications are vital for businesses that want to ensure that every call is answered, even after hours or when everyone is busy, and that messages are properly and efficiently managed. Avaya IP Office offers several messaging applications — VoiceMail Lite, Embedded Voicemail and VoiceMail Pro — supporting features such as automated attendant, voicemail, unified messaging, fax routing, interactive voice response (IVR), text-to-speech (TTS), centralized voicemail, and networked messaging.

Capabilities

Automated attendant — Greets callers, provides information via recorded messages and routes them to the appropriate extension. IP Office attendant solutions can be customized to handle calls in different ways at different times.

Voicemail — Enables employees, customers and collaborators to send and receive information, wherever they are located, at any time of day or night. For example, employees and managers can send/forward messages to one or more mailboxes, address messages by name or extension, or use the built-in directory. The messaging system can be set up to automatically “find” you and let you know you have a new message.

Voicemail to E-mail presentation — Access voicemail and e-mail in one mailbox and see all your messages together. Receive your voicemail message attached to an e-mail and access it remotely on your PC without having to dial into the phone system. Save and forward voice messages the way you do e-mail. Optionally, hear e-mails read aloud over the phone and reply to them while you are on the move.

Unified messaging — Enhancement of Voicemail to E-mail presentation providing message synchronization. Additionally, employees can access voicemail messages through web browser enabling them to select and listen to specific voicemail messages.

Networked messaging — You can network multiple IP Office systems and administer the entire messaging network from one central location. Networked offices can even synchronize directories for automatic updating.

Primary Benefits

Customer service — Help ensure that business-critical calls get through and reach the right person, extension or department, every time.

Efficiency and productivity — Handle calls quickly during peak calling periods and streamline call routing. Screen calls, so users can see who is calling without interrupting important tasks.

Keep growing — Start basic and expand with additional capacity and applications when and if you need them.

Avaya Advantage

Avaya IP Office voice messaging solutions streamline message handling by enabling messages to be retrieval from a touch-tone telephone or PC - via the built-in voicemail to e-mail presentation capability.

IP Office Messaging Options

	Embedded Voicemail	VoiceMail Lite	VoiceMail Pro
